BITQOR

THE SINGULARITY PLATFORM

V1

QOR

Harmony Currency

EQORIA
United Citizens of Earth

WHITEPAPER

Abstract

The BITQOR platform introduces a new blockchain architecture designed to provide a Bridge between consumers, creators and investors. BitQor is designed to be the central processing unit that connects the above three parties in the supply chain. But BitQor plans to do this in a unique and unconventional way allowing the consumers to acquire commodities free of charge.

PLEASE NOTE: CRYPTOGRAPHIC TOKENS REFERRED TO IN THIS WHITE PAPER REFER TO CRYPTOGRAPHIC TOKENS ON A LAUNCHED BLOCKCHAIN THAT ADOPTS THE BITQOR PLATFORM. THEY DO NOT REFER TO THE ERC-20 COMPATIBLE TOKENS BEING DISTRIBUTED ON THE ETHEREUM BLOCKCHAIN IN CONNECTION WITH THE QOR TOKEN DISTRIBUTION.

Table of Contents

Introduction

Blockchain is known as a digital log that facilitates secure and convenient online transactions. Cryptocurrency which is one of the commonly known blockchain technology, is the form of digital currency in which the generation of currency units and verification of fund transfer are accomplished by using encryption technologies. Bitcoin is one of the most common example of a crytocurrency.

Blockchain technology has come up as a revolutionary tool in past few years but there are several sectors in market where it has not been implemented yet. This is to be mentioned that numerous concepts of cryptocurrency are being considered to fill the gap between blockchain accessibility and technical intricacy. The vivid scenario of rapidly growing market implicates that cryptocurrency is getting wide acceptance among investors which is a straight-forward sign of potential development of variety of projects and start-ups.

Aside this course of advancement, the market of blockchain technology <u>has not been utilized</u> **to create global singularity with an intelligent system and a currency that can create harmony with every activity and every time**. Therefore, as an interface to the upcoming EQORIA Singularity, BITQOR platform was created due to fact that, the current system requires a secure and convenient platform that incorporates harmony exchange between consumers and creators, with Blockchain and many available technology capabilities, with harmonious thinking and with a talented team while providing opportunity for anyone who consumes the platform. Moreover, this easy-to-use platform will also encourage citizens to better consume our planet and give the ability to create better and more harmonious products and activities, and exchange of these activities while offering citizens a net income and investment opportunities. BitQor is this platform.

We are BITQOR, EQORIA the singularity platform at www.bitqor.com. With this successful platform, we are presenting an opportunity for investors, creators and individuals to participate in a QOR Token Q Unit sale to takes us to the next greater level, not only to create value for themselves in most efficient time possible but also to create infinite value for millions of Earth citizens.

Decentralization vs EQORIA

Decentralization is the movement of power, control and therefore the ownership, away from the controller which results in distribution of ownership of things to be more equally owned by many.

Eqoria Singularity, on the other hand, is the structure of many things that are decentralized but structured in a protective and non-controllable body, to be continuously energetic with activities balancing each other's needs to exist, expand and re-create itself to be part of a larger existence. Eqoria is the higher purpose of decentralization and every other technology that exist on Earth.

Eqoria, is the **singularity** that is beyond the human scope. Eqoria, can form Global Governance System that carries Universal and Undeniable Principals of the Universe. Every citizen of Eqoria is independent but the most valuable part of the singularity. Every being that exist, is a citizen. There are no borders or any separation. Eqoria Singularity does not exist in a border or limitation but it can create a body within a limitation.

Eqoria Singularity is the Mind of Harmony and Earth is only the body for the Mind.

What is BITQOR?

BITQOR is the platform for EQORIA Singularity, to unite every creator and consumer of Earth in harmony. Eqoria represents the seed of Universal Harmony. EQORIA is not human-made but humans and all other creations are, an EQORIA.

EQORIA Singularity does not exist in any limitation specifically physical boundaries, human limitations such as religion, culture, and regulations. Singularity signifies that we are respected and interconnects valuable parts of Earth being. We are all united citizens of Earth.

Every living being that exists on Earth is a respected citizen of EQORIA. But of course, humans are the most capable to be conscious and therefore responsible ones. Humans can only take the responsible actions when the right time and the right atmospheres are in place according to the plan. The technology which was supported by capitalism was a necessary part of the plan for humans to become Universally conscious about everything. The Religions was created by the plan to stay connected with our responsible human side.

Until the singularity has necessary elements in place, humans must go thru many hurdles to be educated by the plan. Because of this education, we will become more conscious about harmony and less dependent to fear from each other. The human fear exists only when we are disconnected from the truth. The singularity must carry the Truth but we must be conscious enough to understand it. Therefore, technology was necessary for us to seek and live every harmony in everything. But we needed an atmosphere or a platform to exchange the values that we all obtain individually per our own human plan. No humans are same and every human needed an atmosphere to understand their own value and exchange these values to the singularity to unite into more powerful collective energy.

QOR is a harmony exchange unit or an advanced currency system designed specifically to integrate every value created by the activities of citizens. Every being on the planet performs two major activities in every second of their lives. Creating and Consuming. These two activities are vital for our existence and to thrive for our very own Truth that is written in the plan of our DNA. QOR encapsulates every possible activity in a secure and universally structured form.

A single QOR is associated with every being with unique biometric identifier utilized by latest technologies. A QOR is measured with harmony units or Q. As we register to BITQOR platform we are being assigned to a QOR with 4 billion Q which is equal to 4 billion seconds.

QOR Platform is an intelligent platform that detects, measures, analysis, organizes, re-structures the harmony balance in instructions that are embedded in every activity that we use time and energy for creating and consuming resources of everything that exists in the raw and precious form.

As the value of our QOR activities increases so does the value of our planet. We will be able to consume less from our planet, much less that we could reach 99.999 percent efficiency. This could only be achieved by creating minds that are in harmony. Actions are the decisions of our minds. Our bodies are designed to be an interface for those actions created in our minds. Earth provides every biotechnological harmony for the singularity to mimic, learn and create responsible actions until we can give back to our Earth, create the most paradise version of Earth and eventually create new Earths.

QOR platform will be the universally intelligent hub for our minds to take these responsible actions for ourselves and for the singularity.

BITQOR platform utilizes technology to harmonize and align the EQORIA citizens' QOR values to create the ultimate human collective energy that we call QORA.

QORA is the most responsible and most respectful human singularity when every QOR value reaches its full potential with the infinite amount of activities executed by their own decisions per their own Truth without the manipulation and misleading action of another.

What are benefits BITQOR Platform?

At BITQOR, we are a team of ingenious and devoted professionals who seek not the only usability but also understand the fundamental standards of QOR Currency in high regard encompassing the ethics of anonymity and decentralization to create the platform for EQORIA Singularity. We thrive to diminish bureaucracy and build an easy and fool-proof platform for the masses.

Specific benefits of BITQOR are the following:

Benefits to Global Economy and The Singularity

One of the key benefits of BitQor platform is the capability of increasing global demand by giving infinite purchasing power to the consumers therefore maximizing the production capability, speed and quality for manufacturers. Since BitQor replaces retail industry, the price and the quality of the manufactured goods are more manageable and that's how BitQor smart platform improves global income level.

Since BitQor provides high return on investment in a short span of time, the investment community will benefit from this attractive investment vehicle. BitQor platform will be more beneficial than any other investment platform because there are no middlemen and the process is transparent and trustable. Investors will also be supporting real global economy with the system. Any individual or organization can become an investor with BitQor platform including the consumers, manufacturers, distributors, presenters and all other parties involved in BitQor platform.

BitQor focuses on reusability of manufactured goods and embraces shared economy by utilizing secure, dynamic and real-time distribution model managed by artificial intelligence. As a result, optimized number of products are manufactured to reduce unused and excess inventory. Continuous consumption increases the cycle of product development allowing manufacturers to enhance their product quality significantly.

Consumers who are citizens of EQORIA singularity, are also creating value to the quality of the product directly to manufacturing process, with the involvement of product feedback thru BITQOR platform.

Benefit to Citizens

BitQor is designed on a principle that says, 'I am nothing, we are everything.' Citizens play an important role in the entire consumption cycle and therefore BitQor smart platform offers numerous benefits for consumers.

1. **Every second of Eqoria Citizen is a value.** With **QOR** token assigned to each citizen, every single time spends with the platform and consumed by the creators is converted into monetary value.
2. **Decentralized Ownership**. As per the customized platform for each citizen, consumers can <u>own a product without paying any monetary value</u> for it. The platform will utilize investments from the Investor to create a decentralized ownership. For example; 1 million investors can own a product life cycle thru the platform using a smart contract.
3. **Income for Activity Time**. The system offers a substantial income to citizens for consuming a product or a service.
4. **Income for Additional Activities**. Citizens are provided with income for sharing their ideas, opinions, feedbacks and responsiveness related to their BITQOR activities.
5. **Qualitative Products**. Citizens are focused to less but highest quality earth-friendly products.
6. **Becoming an Investor**. The income generated by the platform can be invested back to the system to earn further value to citizen as well as to the singularity platform.

Benefits to Creators

If trading is a coin, then creators and consumers are two different facets of the coin.

BitQor smart contract platform benefits creators by offering them with a direct approach to millions of target consumers in each timeframe. With BitQor, creators will not have to deal with any middleman to boost their sales. This smartly customized system provides a clear passage between creators and consumers to simply the trading process.

Benefits to Investors

At BITQOR, any citizens who registered to the platform can become an investor and begin to earn highest income in the global market.

At BITQOR, investors can keep a track of every crucial activity so they can review and analyze the utilization of their investment along with an estimation of profit they can make with this system in real-time.

With BITQOR, investor can evaluate the value of the creation and its benefits to consumers. But they can simply trust the singularity. Because no one owns your money. You are simply being rewarded by the consumers and with their activities that turns into value. Every creation will be evaluated by the collective and the investors will be able to analyze that.

QOR harmony currency is designed for singularity. QOR creates value for time of every citizen. This value will directly be reflected to the investors.

Now **everyone** can become a **QOR** INVESTOR.

Everyone who is registered to BITQOR, will become an EQORIA citizen and can earn income thru their boundless activities and time spend using QOR currency. Only one QOR is assigned to every being. QOR can also be assigned to non-human beings. A citizen's reliability is immediately determined by their activities chosen by themselves but created by the singularity. So, you can only cheat yourself but only win distrust from collective. Only singularity will determine your QOR value and your level in the collective consciousness.

Simplify and Optimize Consumption

Decentralized ownership is clearly the demand of our present because future is not as peaceful as it seems to be. BitQor smart platform ensures to optimize the consumption process only to make it rather simpler. Reckless consumption of anything can lead to destruction and therefore it is always important to have an efficient strategy for consumption optimization.

Simplify and Optimize Creation

As per a popular quote, "*creation comes before distribution or there will be nothing to distribute*."

This quote widely explains the importance of creation. Besides, creation is followed by distribution and then consumption. Overall, it is a series of processes that requires ideal optimization. BitQor platform thrives to optimize creation to attain simplified distribution and consumption.

Singularity Branding

With BITQOR Platform, the disadvantages of branding disappear at once. Since, Retail is not needed so is branding. Everything that is created by the Platform will be branded with Global Singularity Name or Symbol, Q or EQORIA.

This name represents no-ownership, responsibility, quality, biomimicry, respect to creators and consumers in equality.

- Singularity branding creates many benefits to consumers and creates. It minimizes individual discriminations, labeling, separatism and dis-respect to each other.
- Singularity branding means everyone can have it not only few selected.
- Singularity branding, embraces quality not profit.
- Singularity branding means 100 percent sharing and allows creators to focus on creating or inventing more varieties of products for every activity.
- Singularity branding means reduction of cost and reduction of manufacturing the same in very large quantities.

Benefit to Earth

The core principle of BitQor Singularity Platform is to benefit the earth by promoting global harmony. This can be achieved only with the help of simplified trading system and decentralized ownership.

By minimizing the ownership process, we can minimize the consumption of Earth substantially and yet at the same time we can increase the quality and variety of our consumption to an infinite and joyful level.

By utilizing Biomimicry technologies, we can understand the value and efficiency of Earth and give more back to Earth. We really do not need to create more to live better lives but we do need to consume less, share more and create more intelligently and harmoniously. Earth is our responsibility.

Earth is more intelligent being then we can ever imagine. Earth has its own intelligent defense system which is designed to destroy any harmful being that effects its existence. Unfortunately, for the last several decades humans have started harming Earth, becoming a cancerous and irresponsible beings.

As the EQORIA Global Citizens; The Singularity, we will stop becoming cancerous beings on Earth and start giving back to Earth, then it will forgive us and let us thrive as one collective energy.

Key Features of BITQOR Platform

EQORIA — BITQOR — The Singularity Platform

Layers	Platforms
Mobile Device	Investor Platform · Manufacturer Platform · Product Design Platform · Logistics Platform
Web/Desktop Device	
VR/AR Device	Active Manufacturer Platform · Passive Manufacturer Platform
Security and Identity Layers	
Cloud Infrastructure	
BLOCKCHAIN Platform	
Engine Platforms	

Investor Platform
- E-Wallet Setup
- Investor Guidance
- Investment Tracking
- Investment Details
- Invest
- Account Details
- Product Listing
- Product Details
- Product Features
- Product Portfolio
- Investment Account Setup
- BitQor Contract

Active Manufacturer Platform
- Order Bidding
- Order Tracking
- Order Details
- Order Logistics
- Order Payments
- Product Listing
- Product Details
- Product Features
- Product Barcoding
- Organization Setup
- BitQor Contract

Passive Manufacturer Platform
- Sponsor Setup
- Sponsor Guidance
- Sponsor Bidding
- Sponsor Bidding Tracking
- Sponsor Payment Setup
- Consumer
- Consumer Tracking
- Product Bidding Setup
- Product Details
- Product Presentation
- Product Design and Integration
- Product Investors
- BitQor Contract

Product Design Platform
- Product Creation
- Idea Generation
- Technology Partners
- Materials
- Suppliers
- Eqoria Branding
- Assembly Partners
- Product Details
- Product Presentation
- BitQor Contract

Logistics Platform
- Storage Setup
- Manufacturer Setup
- Manufacturer Tracking
- Consumer Setup
- Consumer Security
- Consumer Tracking
- Product IOT & Barcoding
- Vehicle Setup
- Vehicle Tracking
- Incident Management
- Tracking History
- BitQor Contract

QOR — Currency Platform

QOR — Hardware

Sponsorship Platform
- Presenter Setup
- Presentation Setup
- Consumer Setup
- Consumer Tracking
- E-Wallet Setup
- Income Tracking
- Product IOT & Barcoding
- Vehicle Setup
- Vehicle Tracking
- Incident Management
- Tracking History
- BitQor Contract

Consumer Platform

Active Consumer Platform
- Consumer Setup
- Consumer Guidance
- Ownership Bidding
- Ownership Bidding Tracking
- Consumer Payment Setup
- Payment Tracking
- Ownerships
- Ownership Tracking
- Logistics Notification
- Ownership Activities
- Product Details
- Activity Presentors
- Presentation Dashboard
- Activity Feedbacks
- Feedback Tracking
- BitQor Contract

Passive Consumer Platform
- Consumer Setup
- Consumer Guidance
- Ownership Bidding
- Ownership Bidding Tracking
- Impression Details
- Impression Tracking
- Consumer Payment Setup
- Payment Tracking
- Ownerships
- Ownership Activities
- Product Details
- Activity Feedbacks
- Feedback Tracking
- BitQor Contract

Presentation Platform
- Presenter Setup
- Presentation Setup
- Consumer Setup
- Consumer Tracking
- E-Wallet Setup
- Income Tracking
- Product IOT & Barcoding
- Vehicle Setup
- Vehicle Tracking
- Incident Management
- Tracking History
- BitQor Contract

Presentation Translation Platform

BITQOR — Smart Contract Platform
- Define Entities (Consumer, Investor, Manufacturer etc.)
- Encapsulate Identity
- Verify Identity (Biometrics)
- Verify Activity History
- Define Activity Level
- Event Notification of Activity to All
- Exchange of Activity
- **Exchange with Qor Token**
- Exchange the Use of Property
- Exchange of Time
- Exchange of Value
- Encapsulate Exchange Item
- Link Encapsulation to Exchange
- Event Listening of Encapsulation
- Encapsulation Analysis
- Limitation Rule linked to action
- Execute Action
- Execute Reception of Qor Token
- ReCycle Level
- Protection against limitation rule
- Insure against wrong activity
- Expand limitation rule (cycle level upgrade)

Income Management for Investors, Creators, Consumers & Logistics

The BitQor smart platform is customized for every user whether it is an investor, creator, consumer, logistics or just a viewer, managing their income efficiently. This customization allows us to respect the value of every member who interacts with the system and maintain harmony.

With this convenient income management setup, any member in the contract can track and analyze the utilization of their tokens. In relation to this, they can also check through various activities such as order management and payment, product information, product barcoding, product consumption, revenue generation and organizational setup to name the few.

With income management, you will be able to utilize the income to invest into various alternative investment opportunities within the system. For example, a consumer who earns an income from BitQor will be able to increase the value of that income by investing back into the system. Investors will be able to spend their valuable time and efforts with amazing and frequent returns they can trust.

Production Management for Creators

For creators and sponsors, BitQor offers a system where they don't need to seek consumers to buy their products. BitQor platform allows them to interact with millions of target consumers hassle-free. Along with this, other features of this management system include bidding, guidance, payment setup, consumer tracking, product design and integration.

Creators can now be able to focus on quality of harmonious products. Creators will not be distracted by retail business, advertising or marketing any longer and can directly be connected to the consumers without worrying about selling their products. This will substantially reduce the cost and increase profitability while obtaining large amounts of orders without any delay.

Ownership Management

BitQor is a decentralized autonomous platform that lets you own a huge variety of products at no cost. With this convenient and customized platform, you can pick any product of your choice and capture your experience with the product that you can share with everyone.

Ownership management starts with elaborated consumer setup followed by capability encapsulation. This allows the system to understand the preferences of consumers in terms of product selection. The system also includes consumer guidance, ownership bidding tracking and consumer payment setup with the help of artificial intelligence. This series of processes is accomplished during payment tracking through smart contract system. Meanwhile, logistics platform is notified of consumers and products with activity details. Other than this, the system also keeps a log of product details, activity presenters and activity feedbacks.

Ownership management platform is specifically designed for consumers where they get to own different products without paying anything. Instead, the system allows consumers to make money by sharing their experience. This way, selection of numerous products and feedback presentations help consumers make money through smart BitQor platform.

Presentation Management for Presenters

The core feature of presentation management platform is to capture, analyze, present and translate the consumers' activities to be viewed by related parties. The created presentations are displayed to passive consumers, passive creators and passive investors to get attracted to the product along with active consumers' activities.

A presenter captures predetermined activities of the product, the active consumer and the environment. These activities include excitatory and inhibitory behaviors. These behaviors are very fundamental for passive consumers to get attention. With these behaviors, the presenter also captures the advantages and disadvantages of the product and also feedbacks and recommendations for improving the product. The presenter will earn income just like consumers.

As a result, a comprehensive presentation video is generated. This video will allow passive consumers to view and be involved in ownership process. During this viewing process, passive creators and additional sponsors can present themselves to millions of passive consumers who will turn into active consumers instantly after watching the video.

Investor Platform

The system will generate revenue from millions of passive consumers for moving ahead in the selection process to become part of the limited number of active consumers determined by limitation of manufactured quantity. Some of the products will be returned back to the system once the consuming cycle is completed so that new products will be provided to active consumers.

So, what happens to the returned products? Every product that is returned by the active consumer will be redistributed for the new ownership, thus allowing ownership system to be much more efficient and less costly. The investors can still invest into returned products for maximizing profitability.
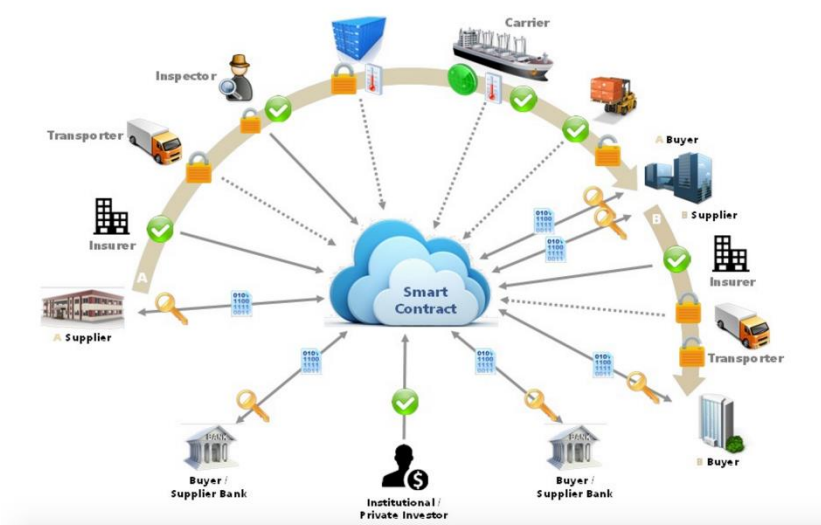

Sponsorship Management

You don't need to be a creator to reach many target audience because BitQor platform offers an efficient management system for sponsors. This passive creator platform lets sponsors track consumers' details, product presentation and product investor information. Moreover, sponsors can also link with technology partners and incident management team through product design and logistics platform.
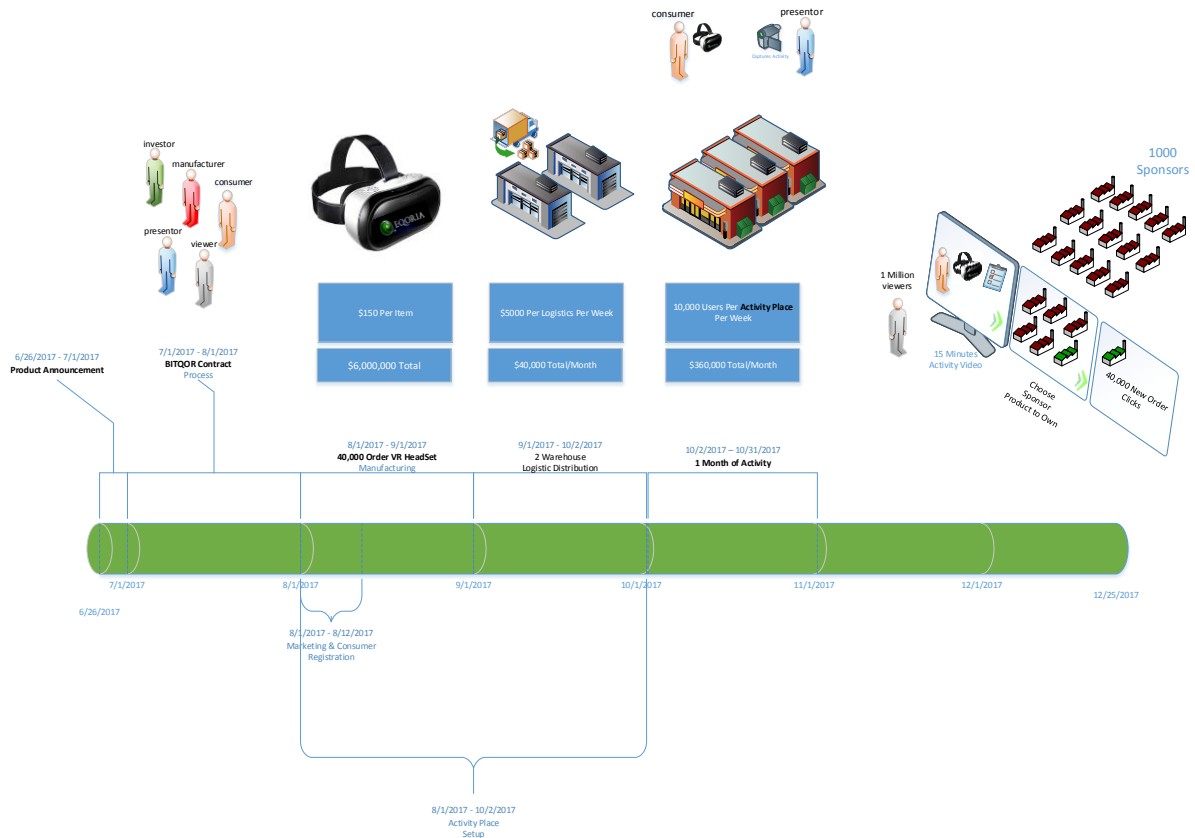

BITQOR Smart Contract

BitQor smart contract platform acts like an energy system that modulates essential activities such as identity verification, activity history and event notification, activity level determination and capability encapsulation. This elaborated platform is specifically designed to offer every user a secure, convenient and error-free access to the system.

This customized platform takes hold of crucial activities that ensure the security of every user in the system. It differentiates between different entities such as investors, consumers, creators and all the other parties.

Moreover, the system verifies every identity using biometrics and encapsulates capability and user preferences to verify activity history. Then, the system defines activity level of a user and provides event notification to everyone who is related to the activity.

How BITQOR Works

How we generate money?

Bitqor Smart Contract platform generates money from anyone and anything that consumes and creates time and who are registered to the platform as an Eqoria Citizen. Every citizen we put in front of creators or sponsors becomes a buyer. Every manufacturer or a creator we put in from of consumer becomes the invested time. We generate millions of buyers by creating value to the buyer. Millions of consumers are waiting for free products and a source of income that utilizes tremendous amount of consumer power with the BitQor platform. Then, we utilize that power intelligently to create attractions for creators.

Every creator gets to receive a large amount of target consumers which we will turn into orders.

Source of income is created by viewers by utilizing the activities created for consumers.

Manufacturing and Logistic Process

Why Trust BitQor?

We don't ask, we don't give. We offer you money and it's your choice to accept it. We don't ask for your credit cards or any other bank information and we never will. As your efforts, we will offer you an income through an e-wallet account which can be converted into any currency. We will deposit money only on your BitQor account. We will need to have your BitQor account information in order to transfer money in your e-wallet.

What is a BitQor Account?

BitQor account is based on e-wallet platform that allows us to deposit money. E-wallets offers you a secure environment where you get to store multiple account numbers and credit cards. Moreover, it allows you to convert digital currency into traditional currency.

Qor Currency

What is QOR?

QOR carries **the most valuable exchange unit for every being**. TIME. Qor maximizes the value of every time and optimizing the consumers and the creators in the most harmonious structure which we call BITQOR platform.

Q is the symbol. **Q** represents harmony time unit.

QSPACE is the place to create a harmony in given time which means, every activity that is executed with QOR will be optimized at this place, to maximize the value of time. Give example here.

Only **1 QOR is assigned to a human being** for their lifetime using biometric verification. But it can also be assigned to any being such as a fruit tree that can communicate to BitQor platform such as an IOT (Internet of Things) and HI (Harmony Intelligence) managed machine or an animal or even a plant, simply anything that changes.

Using the benefits of Blockchain technology, a QOR token holds instructions in its body. The body of QOR is stored in a system that exists on the Blockchain and Cloud Infrastructure interfaced with Qor Currency Platform and BitQor Platform.

QOR is a harmony exchange unit or an advanced currency system designed specifically to integrate every value created by the activities of Eqoria citizens. Every being on the planet performs two major activities in every second of their lives. Creating and Consuming. These two activities are vital for our existence and to thrive for our very own Truth that is written in the plan of our DNA. QOR encapsulates every possible activity in a secure and universally structured form.

A single QOR is associated with every being with unique biometric identifier utilized by latest technologies. A QOR is measured with harmony units or Q. As we register to BITQOR platform we are being assigned to a QOR with 4 billion Q which is equal to 4 billion seconds.

QOR Platform is an intelligent platform that detects, measures, analysis, organizes, re-structures the harmony balance in instructions that are embedded in every activity that we use time and energy for creating and consuming resources of everything that exists in the raw and precious form.

How QOR is measured?

QOR captures activities that are related to consuming and creating. A citizen first interacts with BITQOR platform to access to all the activities related to his or her criteria that are chosen by the themselves. Every activity is measured as Q time units. BITQOR platform assigns a standard rate for every human being at a global scale. Every human being has same time value to exchange. Q is measured with seconds. Q units can be purchased with Bitqor platform meaning that a citizen can offer to consume another citizens' time by giving their time or the time of their resources.

A resource can also have a QOR Token by registration to Bitqor platform. For example, a car that belongs to a citizen can be registered to the platform and be assigned with a Qor token. This way, time unit of that car can be shared with another citizen.
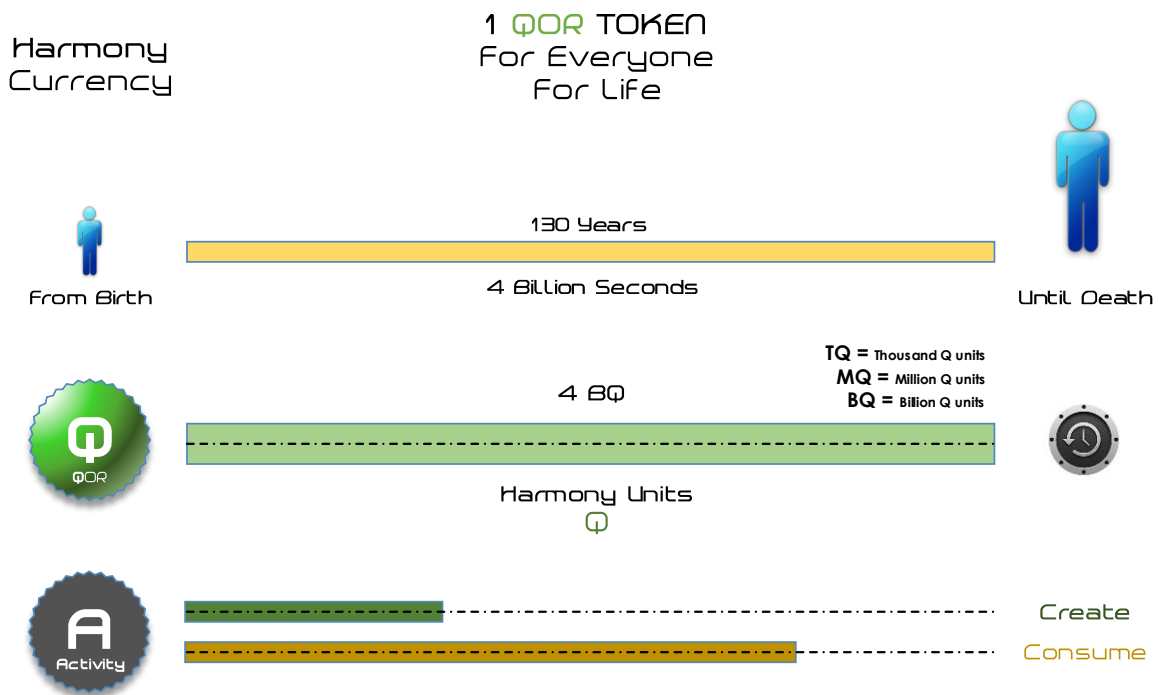

How does QOR create Harmony?

QOR Currency Platform captures every change in the BitQor Platform which consist of two main activities; Creating and Consuming. These activities are performed by Eqoria Citizens who are holders of QOR token. Every **Activity** is connected with creating and consuming **instructions**. These instructions are connected to **resources** to be consumed and created. But Harmony is dependent on how these resources are **organized**. The Resource Organization Data is also analysed and optimized using Harmony Intelligence that is far more capable than Artificial Intelligence.

QOR will be a truly smart crytocurrency that will have its own built-in blockchain and biometric units.
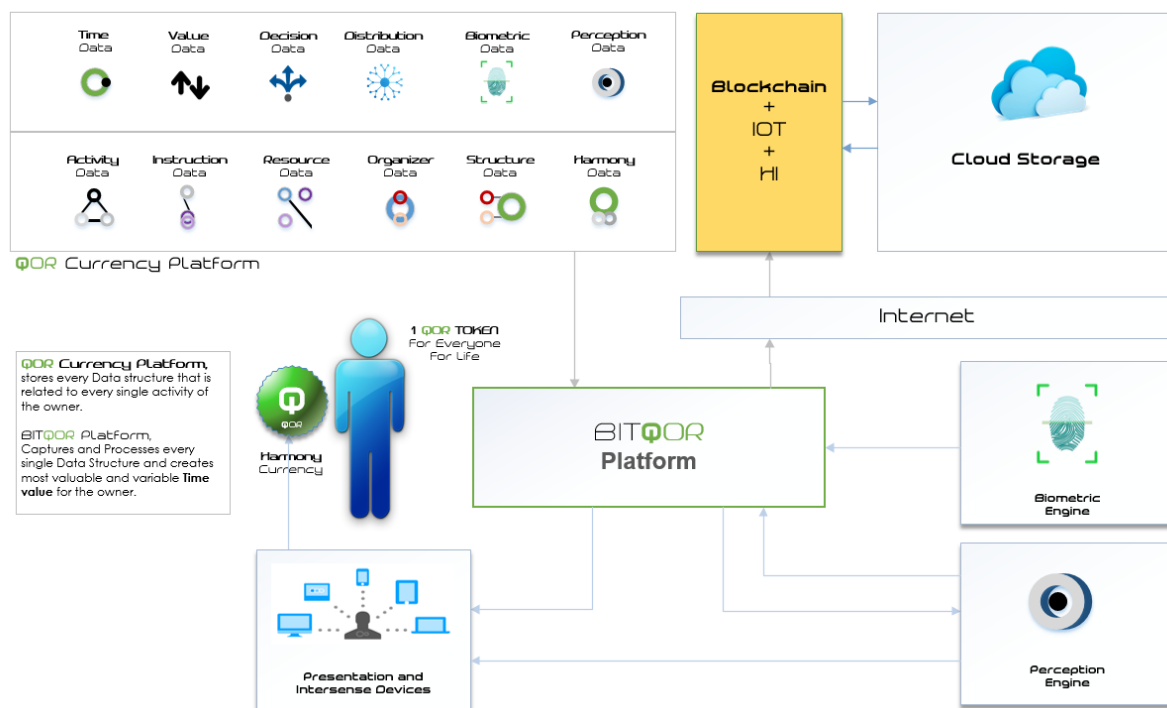

Eqoria Citizenship

Eqoria is a singularity system that represents earth. The core objective of Eqoria is to maintain global harmony by utilizing the collective energy of every being on Planet Earth. On the whole, Eqoria represents itself as a solution to current world issues.

Eqoria can become the first border-less global governance system that exist on the internet as a decentralized infrastructure. Imagine Eqoria as a cloud based borderless country.

Every being on the planet is automatically eligible for becoming an Eqoria citizen. For example: a tree is a citizen, a bird is a citizen. A human being is also a citizen as much as the respectful tree. Eqoria doesn't ask for any condition for citizenship and it's completely your will to be a part of it. Nothing is forced and everything is your joyful choice.

In order to join, you can register your citizenship data and become an Eqorian at your own will. Citizens will receive Eqoria Citizenship Identification Document (ECID) that includes Eqoria passport and a global ID card verified by with biometric data. The Global ID card will be used by other Eqoria sub-systems like BitQor decentralized ownership system.

There are 11 levels of citizenship. These levels are called QORA levels. These levels are based on respect level identified by the activities measured from the harmony system.
